

IPSOS POPULISM SURVEY:

POPULISM, ANTI-ELITISM AND NATIVISM
28-country Ipsos
Global Advisor survey

February 2024

Clifford Young, President
Politics and Society

GAME CHANGERS

PART 1: SURVEY HEADLINES

IPSOS POPULISM SURVEY

Welcome to the Ipsos Populism survey. This special report is designed to help us get closer to the dynamics of populism and public opinion in a year which will be defined by many elections around the world.

We interviewed 20,630 adults in 28 countries around the world between 22 November and 6 December 2023. See appendices for details.

This document contains a summary of the key findings, alongside an analysis of how to measure and understand populism. Full breakdowns of the findings for each country, including trend data going back to 2016, are also provided.

Please contact **Clifford Young** for more information.

IPSOS POPULISM SURVEY

Key Findings

#1 Potential for Populism
Anti-establishment sentiment is up slightly from 2022, with many people in many countries holding these views.

#2 Elections in 50+ countries - largest natural experiment in history?
Roughly 4 billion people are going to the ballot box this year at a time, when 63% feel their country needs a strong leader to take the country back from the rich and powerful.

#3 Pessimistic about their country's progress.
Fueling populist sentiment, 58% globally feel that their country is in decline, and 57% feel their country's society is broken.

#4 Backlash towards immigrants.
59% of people globally feel that when jobs are scarce, employers should prioritize hiring people of their country over immigrants.

#5 Elite suspicion.
62% view elites as a closely connected group of people with similar interests and views. Pluralities in almost all countries feel elites operate based on their self-interest.

#6 Populists want a different government, not a small government.
Despite support for anti-establishment politics, 75% of those polled support government spending on healthcare, and 67% support spending on reducing poverty and social inequality.

PART 2: MEASURING POPULISM

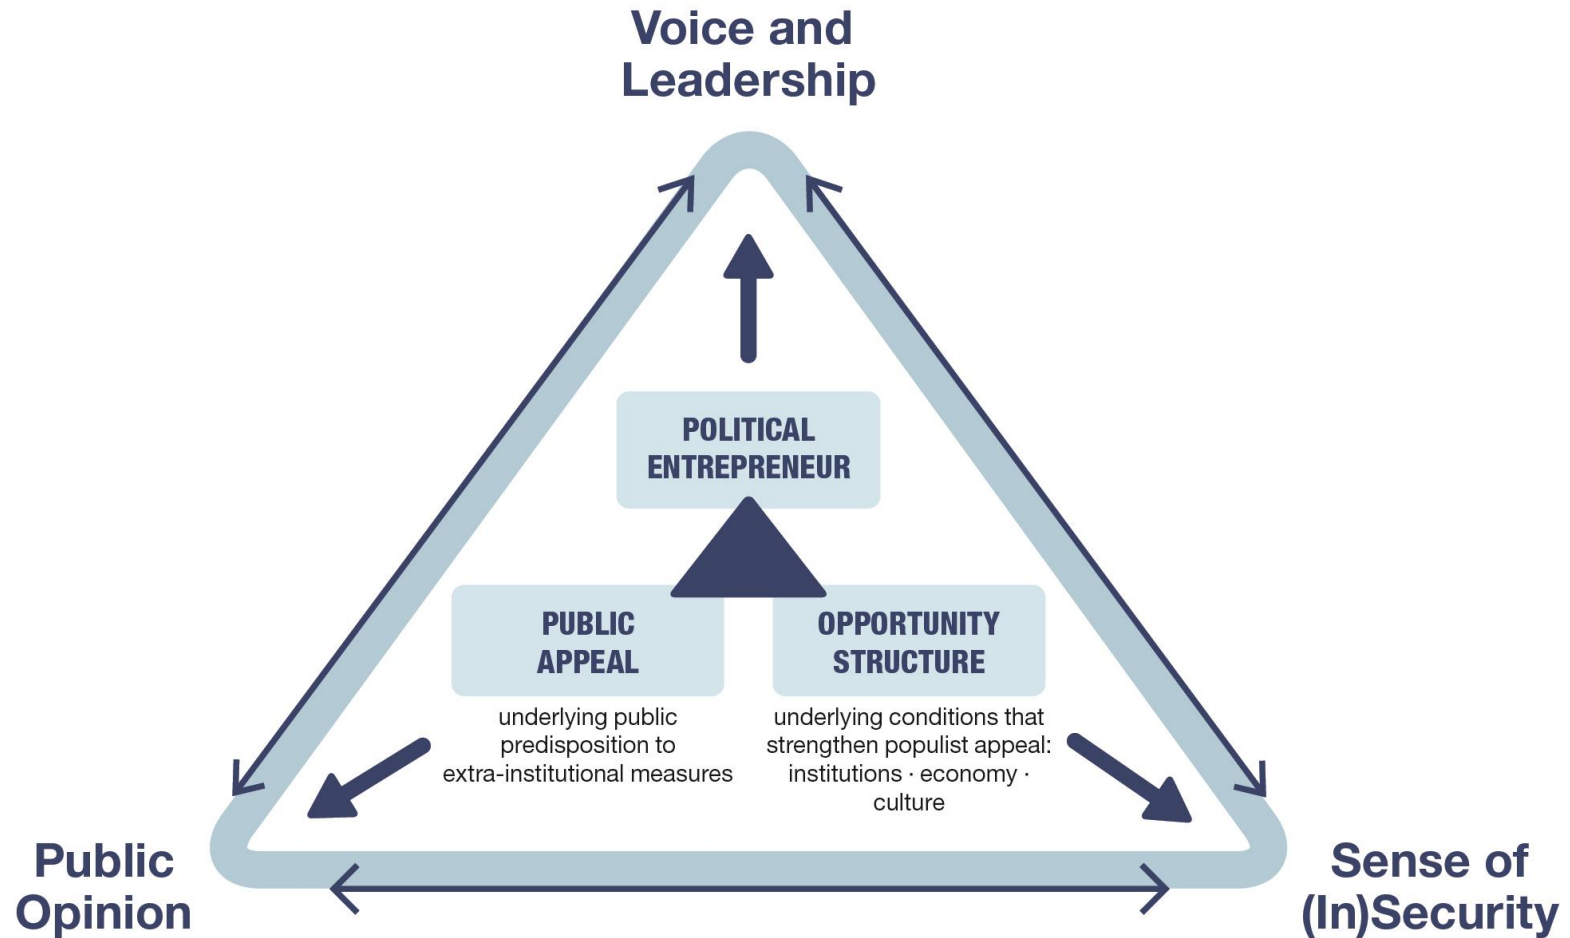

INTRODUCTION

2024 is arguably the largest natural experiment in human history, with roughly four billion people going to the polls in 50-plus countries. This year will show what works and what doesn't work for voters.

By [populism](#), we mean a political strategy employed by a political entrepreneur with some specific aim, usually electoral, in mind.

Any successful political entrepreneur depends on two additional pillars: (1) popular support of **anti-establishment actions**, and (2) a **structural opportunity**, such as an economic calamity or changing demography, that makes taking political risks palatable.

CONDITIONS FOR POPULISM

Source: Ipsos

MEASURING POPULIST SUPPORT

At Ipsos, we measure populist support using our “system is broken index” (See slide 22). We first developed the index in Latin America in the early 2000s, redeployed the index to the U.S. in 2015, and have been tracking this sentiment globally since 2016. Critically, the index captures **discontent with the prevailing political establishment** and the **public’s willingness for leaders to “break the rules”** in order to fix their country.

Typically, we see long-term **economic and demographic change** as the driving forces behind populist sentiment.

Take, for example, the relatively high percentage of foreign-born people living in the U.S. right now. Politically, former President Donald Trump has taken advantage of these changing demographics by blaming the U.S.’ problems on the influx of immigrants. Here, **within a given opportunity structure**, groups like immigrants, elites, experts, and ethnic minorities are blamed for the problems facing the nation. The specific populist target will depend on the **context and country**. But the “blame game” is the hammer of the populist toolbox.

The Rise of Populism: A Global Approach

Entering a new supercycle of uncertainty

MEASURING POPULIST SUPPORT

Country in decline

Across 28 countries, two in three say their country is in decline

On average across each of the 28 countries, a majority feel their country's society is in decline, levels that are highest in South Africa (72%), the Netherlands (71%) and Sweden (71%).

In countries with major elections, Great Britain saw an 11-point increase in this sentiment from 2021 (64% in 2023 vs. 52% in 2021). In other countries with major elections in 2024, South Africa had a particularly high feeling that their country is in decline at 72% while the United States hovers just over the global average, at 59%.

System is broken

Globally, three in five say the system is broken

A plurality of respondents (57%) across the 28 countries surveyed feel their country's society is broken, with the exception of Singapore (27%). These levels are highest in South Africa (76%) and Sweden (73%).

A majority of respondents in almost all countries say their country needs a strong leader to take the country back from the rich and powerful (63% on average). A majority in all 28 countries (67% on average) also believe the main divide in their society is between ordinary citizens and the political and economic elite.

Immigration and elites

Anti-immigrant sentiment varies widely globally, as anti-elitism is more uniform

There is a wide disparity between countries when it comes to immigration. Most respondents in Türkiye (77%) say their country would be stronger if it stopped immigration, while Japanese (16%) and South Korean (19%) respondents were the least likely to agree.

A plurality in all countries feel that the "elites" in their country make decisions based on their own interests over the needs of the rest of the people in their country, levels that are highest in Hungary (69%) and Argentina (67%).

SPOTLIGHT ON: 2024 SELECT ELECTIONS

Country	Date	Type	Broken System (Global average 61%)
Indonesia	February 14	Presidential	62%
India	April to May	Parliamentary	73%
South Africa	May to August	Parliamentary	73%
Mexico	June 2	Presidential	62%
United States	November 5	Presidential	60%
United Kingdom	Latest January 2025	Parliamentary	64%

Global citizens are strongly predisposed to populist and anti-establishment solutions. This sentiment has had a majority leaning since 2016.

The building blocks of populism are alive and well in 2024. When it comes to select elections this year our survey shows similarly strong tendencies towards populist and anti-system attitudes. Global citizens have lost faith in their political systems.

“Traditional parties & politicians don’t care about people like me” is a case in point. Large majorities in Indonesia, Mexico, South Africa, India, the U.S., and the UK all agree with this statement. Strong also believe there is a need for a strong leader to fix their country. Furthermore, large swaths of populations similarly agree that the “system is rigged.”

SPOTLIGHT ON: ANTI-ESTABLISHMENT CONTEXT

Anti-establishment sentiment has been shown to correlate with varying forms of social and political disorganization. This can run the gambit from a breakdown of political norms to violations of constitutional principles, including electoral interference.

Large majorities or pluralities in many countries are suspicious of elites, experts, and immigrants. All these groups are potential scapegoat targets for anti-system, populist leaders. For example, consider “experts.” There are large majorities in Indonesia, Mexico, South Africa, India, the U.S., and the UK who view experts in their countries with suspicion. Strong pluralities to majorities in these countries also agree that immigrants should be prohibited from holding a job under certain circumstances. Again, examples of the “other”—a populist ploy—can be found throughout our survey.

Global citizens are also strongly in favor of government intervention—socially and politically. Supermajorities in Indonesia, Mexico, South Africa, India, the U.S., and the UK believe the government should increase spending on infrastructure, education, healthcare, public safety, create jobs and reduce poverty. Populists are against the prevailing political order, not large, robust government.

SPOTLIGHT ON: COUNTRY SPECIFICS

Anti-system sentiment has been relatively constant among Americans since 2016. Here, Trump captures the prevailing zeitgeist as the champion of a broken country. Biden, in contrast, is the quintessential establishment candidate. Which worldview will prevail? Establishment or anti-establishment? We will see.

Similarly, anti-system governments in Mexico, Indonesia, and India all are attempting to stay in power. To this end, high levels of anti-system sentiment in these countries reinforce such politics. Modi in India, Subianto in Indonesia, and Sheinbaum in Mexico all are favored to win. But elections are more than just attitudinal leanings. Other mechanisms, like the economy, matter. That said, a sweep here would strengthen the anti-system movement globally—a check on prevailing establishment politics.

In contrast, the UK has a general election later this year. After a rallying-around period during the pandemic, there has been a steep increase in those who feel the country is in decline, with concerns spanning the economy, public services, and immigration. At the moment, Labour is taking advantage of this time-for-change sentiment but is not backed by a lot of public enthusiasm. An establishment party will win in the UK this year against the backdrop of strong anti-system sentiment.

Finally, South Africa has one dominant establishment party—the ANC. But cracks are showing, and anti-establishment sentiment is high. The challenges more than likely will come from within the party. We are keeping a special eye on the unique way that anti-system sentiment might manifest itself in South Africa.

LOOKING AHEAD

2024 will produce a wide-variety of electoral outcomes. In some countries, anti-establishment governments have a good chance of staying in power. In others, we can expect a battle between the establishment and anti-establishment.

The U.S. is the classic case of this. Countries like Germany, with its EU parliamentary and district elections this year, will similarly see establishment and anti-establishment candidates face off with uncertain consequences.

Finally, some, like the UK and South Africa, have strong establishment inertia—Britain with its two historical parties and South Africa with the traditionalist party, the ANC. How will anti-establishment fervor show itself across these contexts? It's difficult to say. **But here at Ipsos we will keep the continual pulse of the world in 2024.**

METHODOLOGY

Methodology

These are the results of a 28-country survey conducted by Ipsos on its Global Advisor online platform and, in India, on its IndiaBus platform, between Friday, November 22 and Friday, December 6, 2023. For this survey, Ipsos interviewed a total of 20,630 adults aged 18 years and older in India, 18-74 in Canada, Malaysia, South Africa, Turkey, and the United States, 20-74 in Thailand, 21-74 in Indonesia and Singapore, and 16-74 in all other countries.

The sample consists of approximately 1,000 individuals each in Australia, Brazil, Canada, France, Germany, Great Britain, Italy, Japan, Spain, and the U.S., and 500 individuals each in Argentina, Belgium, Chile, Colombia, Hungary, Indonesia, Malaysia, Mexico, the Netherlands, Peru, Poland, Singapore, South Africa, South Korea, Sweden, Thailand, and Turkey. The sample in India consists of approximately 2,200 individuals, of whom approximately 1,800 were interviewed face-to-face and 400 were interviewed online.

Samples in Argentina, Australia, Belgium, Canada, France, Germany, Great Britain, Hungary, Italy, Japan, the Netherlands, Poland, South Korea, Spain, Sweden, and the U.S. can be considered representative of their general adult populations under the age of 75. Samples in Brazil, Chile, Colombia, Indonesia, Malaysia, Mexico, Peru, Philippines, Singapore, South Africa, Thailand, and Turkey are more urban, more educated, and/or more affluent than the general population. The survey results for these countries should be viewed as reflecting the views of the more “connected” segment of their population.

India’s sample represents a large subset of its urban population — social economic classes A, B and C in metros and tier 1-3 town classes across all four zones.

The data is weighted so that the composition of each country’s sample best reflects the demographic profile of the adult population according to the most recent census data. “The Global Country Average” reflects the average result for all the countries and markets in which the survey was conducted. It has not been adjusted to the population size of each country or market and is not intended to suggest a total result.

When percentages do not sum up to 100 or the ‘difference’ appears to be +/-1 percentage point more/less than the actual result, this may be due to rounding, multiple responses, or the exclusion of “don’t know” or not stated responses. The precision of Ipsos online polls is calculated using a credibility interval with a poll where N=1,000 being accurate to +/- 3.5 percentage points and of where N=500 being accurate to +/- 5.0 percentage points. For more information on Ipsos’ use of credibility intervals, please visit the Ipsos website.

The publication of these findings abides by local rules and regulations.

GAME CHANGERS

In our world of rapid change, the need of reliable information to make confident decisions has never been greater.

At Ipsos we believe our clients need more than a data supplier, they need a partner who can produce accurate and relevant information and turn it into actionable truth.

This is why our passionately curious experts not only provide the most precise measurement, but shape it to provide True Understanding of Society, countries and People.

To do this we use the best of science, technology and know-how and apply the principles of security, simplicity, speed and substance to everything we do.

So that our clients can act faster, smarter and bolder.

Ultimately, success comes down to a simple truth:

You act better when you are sure.

“**Game Changers**” – our tagline – summarises our ambition to help our clients to navigate more easily our deeply changing world.

**BE
SURE.
ACT
SMARTER.**

GAME CHANGERS
